¹ **Data Source for United States:** Centers for Disease Control and Prevention (CDC), Atlanta, GA, HIV/AIDS Surveillance from 1981 through September 2005. These data are provisional.

² Data Source for Utah: Utah Department of Health, AIDS cases reported from 1983 through February 28, 2009. HIV infections reported from April 25, 1989, through February 28, 2009. HIV statistics do not include persons tested anonymously.

³ **Other Considerations:** Cases with more than one risk factor are tabulated only in the category listed first. Percentage may not equal 100 because of rounding. All data is provisional.

⁴ For U.S. data only, "**other**" includes 33 health-care workers who developed AIDS after occupational exposure to HIV-infected blood. "**Undetermined**" refers to patients whose mode of exposure to HIV is unknown. This includes patients under investigation; patients who died, were lost to follow-up, or refused interview; and patients whose mode of exposure to HIV remains undetermined after investigation.

⁵ Total fluctuates as HIV infections become AIDS cases.

⁶ Includes only persons with HIV infection who have not developed AIDS. As of December 31, 2001, 36 states required confidential reporting of HIV infection.

⁷ **Out-of-State cases:** Individuals who were diagnosed in another state and now reside in or receive medical care in Utah.
